Himam - Sample Section Document

This file ships with the app so the reading screen can be demonstrated before any real material is uploaded.

What this page is for

A section can carry a PDF alongside its text. When it does, the document is shown inline on the reading screen and the section text becomes an introduction to it.

Replacing it

Open the admin dashboard, go to Books, edit a section, and upload the real document in the Section document field.
The upload accepts PDF files up to 20 MB.

Reading and the quiz

Progress is still tracked per section, exactly as it is for a section made of text. Opening the section marks it read; passing its quiz credits the points.

Points are credited once

A section's points land the first time its quiz is passed. Retaking it afterwards is free and useful for revision, but awards nothing further.

On a phone

Most mobile browsers refuse to display a PDF inside a page. There the screen offers a link that opens the file properly instead of showing an empty frame.

Murtaqi Scientific Association

Himam is a structured reading programme: levels, books, sections, and a short quiz after each section.

This is placeholder material

Nothing on these pages is part of the programme's content. It exists so the document viewer can be seen working, and should be replaced before the app is shown to readers.
